

Pelco has been making ladders for more than 72 years

The Palmerston Extension Ladder Co was started in 1937 by Cecil Victor Woodfield. The Company expanded under Cecil's leadership into making wood products for the war effort and then Joinery since 1945.

Arnold Davis worked for PELCO from after the war until 1992

1951

In the late 1950's the Company began making plywood boats and this led to the manufacture of "GULL" brand Oars and Paddles beginning in 1967.

Some of Cecil's first extension Ladders made from North American Oregon stiles and New Zealand Silver Beech rungs.

1937

1968

In 1990 Bruce H Woodfield, the Grandson of Cecil, set out to design a better timber Ladder which could be made from available and renewable timbers. The result is Pelco's Lamilite™ Ladder which is protected by two patents. Bruce now owns almost all of PELCO.

Additional new and patented products are soon to be released from PELCO
